

Damien Pasulj

Product Builder & AI Engineer

\$ whoami — LLM orchestration · RAG · AI pipelines — on a JavaScript Tech Lead foundation

web: damienpasulj.com github: github.com/damienpjs email: dagobert1992@gmail.com phone: +33 6 13 47 94 46
based in: South of France — fully remote

I build AI products end to end — RAG, multi-LLM orchestration, generation pipelines — on **twelve years of product development, four of them as a JavaScript Tech Lead**. Easiest way to see it: on damienpasulj.com, an AI double answers in my place — RAG, automatic provider failover, **95 % test coverage**. I started out in interface design, and it never left me.

\$ PROJECTS

dam.ia — conversational “AI double”

damienpasulj.com

- **Full RAG pipeline**: PDF and web ingestion, chunking, embeddings, Qdrant vector store.
- **Multi-LLM orchestration** with Gemini → Groq failover mid-stream on transient errors (429 quota, 503 overload), and live per-provider status.
- Bounded “head + tail” conversation memory, deterministic repeated-question detection, **prompt injection detection**, Redis rate limiting.
- **95 % test coverage** enforced in CI — 3 GitHub Actions workflows, Vercel previews and production.

hodl-on-a-minute — BTC prediction game hodl-on-a-minute.vercel.app

- Complete live product (Next.js, React 19, DynamoDB): **the client sends a direction and nothing else** — every other value is produced server-side.
- Concurrency enforced by **conditional writes** (one guess at a time, idempotent resolution), tested against a real database; HMAC-signed cookie identity, least-privilege IAM.

Komfy — mobile remote for ComfyUI

github.com/damienpjs/Komfy

- React Native/Expo app (~**20,000 lines of TypeScript**) driving a local ComfyUI instance: real-time queue over WebSocket, gallery, LoRAs, EN/FR i18n.
- **Runtime workflow import**: infers the form from an arbitrary API-format JSON graph, patches the graph, validates it against the connected server.
- “Remix” an image from its PNG metadata; custom Python extension on the server side (recursive listing, soft trash).
- **Security by design**: Tailscale-only network access, no public exposure.

\$ EXPERIENCE

React / TypeScript / Next.js Tech Lead — Apizee

2024 — present

Core SaaS product: front-end architecture, engineering standards, GitLab CI/CD pipelines, leading 3 developers.

Lead — core product rewrite — elloha

2022 — 2024

Complete rewrite of a travel booking SaaS (10,000+ tourism professionals) from ASP.NET/C# to React/TypeScript/Next.js — incremental migration with zero downtime, team of 3 (around ten onboarded over the period).

Web then front-end developer — elloha

2014 — 2022

Main web application in ASP.NET/C#; before that, websites for French tourism destinations (collioure.com, morbihan.com and others).

\$ SKILLS

AI

RAG (Qdrant, embeddings) · LLMs (Claude, Gemini, Groq, Ollama) · agents & MCP · prompt engineering · ComfyUI

Stack

TypeScript · React 19 · Next.js · React Native (Expo) · Node.js · Python

Data

PostgreSQL (Drizzle) · Redis · WebSocket & streaming

Quality & infra

Vitest (95 % coverage) · Jest · Storybook · GitHub Actions · GitLab CI · Vercel

Design

UI/UX (original training) · design systems · Adobe Suite · Blender

\$ TRACK RECORD

Twelve years of product development: CMS → C#/ASP.NET web app → lead of the React/TS/Next.js rewrite → tech lead. The same trajectory I am now replaying on AI products.

\$ EDUCATION

L'IDEM — School of Creative & Digital Professions, France
2012–2014 · UI/UX design then web development

\$ LANGUAGES & THE REST

French native · fluent English
Travel · sport · philosophy · drawing
