### github

[github.com/damienpjs](https://github.com/damienpjs)

### email

[dagobert1992@gmail.com](mailto:dagobert1992@gmail.com)

### phone

+33 6 13 47 94 46

### based in

South of France — **fully remote**

## SKILLS

### Front-end

React 19 · TypeScript · Next.js · React Native (Expo) · Zustand · TanStack Query

### Design system

Storybook · documented components

### Quality

Vitest · Jest · Testing Library · 95 % coverage gate in CI · ESLint

### CI/CD

GitLab CI · GitHub Actions · Vercel

### Back & data

Node.js · PostgreSQL (Drizzle) · Redis · WebSocket

### AI

RAG (Qdrant) · LLMs (Claude, Gemini) · agents & MCP

### Earlier stack

ASP.NET / C# (5 yrs) · DotNetNuke

## EDUCATION

### L'IDEM — School of Creative & Digital Professions

2012–2014 · UI/UX design (year 1), web development (year 2) — France

## LANGUAGES

French — native

English — fluent (I document and code in English)

## OUTSIDE WORK

Travel · sport · philosophy · drawing

# Damien Pasulj

## JavaScript Tech Lead

React · TypeScript · Next.js — front-end architecture & CI/CD

**Twelve years building products, four of them leading core SaaS products.** I led the full rewrite of a legacy ASP.NET/C# web app to React, TypeScript and Next.js, and I keep at it today at Apizee: front-end architecture, CI/CD pipelines and growing the team. Originally trained in UI/UX — I design interfaces as much as I build them.

## EXPERIENCE

### React / TypeScript / Next.js Tech Lead — Apizee

2024 — present

- Technical lead on the core product: front-end architecture, engineering standards and code review for a team of 3 developers.
- Built the GitLab CI/CD pipelines — linting, tests, automated deployments.
- Mentoring and upskilling the team through pairing and documented standards.

### Lead — core product rewrite — elloha

2022 — 2024

- Led the complete rewrite of a travel booking SaaS — used by **10,000+ tourism professionals** — from ASP.NET/C# to React, TypeScript and Next.js.
- Incremental migration with **zero downtime**; defined the architecture, conventions and tooling the team worked from.
- Onboarded developers onto the new stack: 3 at any given time, around ten over the period (internal sessions, pairing, reviews).

### Front-end developer — elloha

2017 — 2022

- Built and maintained the main web application (ASP.NET/C#); deep domain knowledge of travel booking.

### Web developer — elloha

2014 — 2017

- Websites for major French tourism destinations on the DotNetNuke CMS: [collioure.com](https://collioure.com), [tourismegard.com](https://tourismegard.com), [morbihan.com](https://morbihan.com) and others.

## SIDE PROJECTS

### hodl-on-a-minute — [hodl-on-a-minute.vercel.app](https://hodl-on-a-minute.vercel.app)

Live 60-second BTC prediction game. Next.js, React 19, DynamoDB: the client sends a direction and nothing else — every other value is produced server-side. Concurrency enforced by conditional writes (one guess at a time, idempotent resolution), HMAC-signed cookie identity, least-privilege IAM.

### dam.ia — [damienpasulj.com](https://damienpasulj.com)

Conversational personal site where an “AI double” answers questions about my career. Next.js 16, RAG on Qdrant, streaming multi-LLM failover (Gemini → Groq), 95 % test coverage, GitHub Actions → Vercel.

### Komfy — [github.com/damienpjs/Komfy](https://github.com/damienpjs/Komfy)

Mobile app (React Native/Expo, ~20,000 lines of TypeScript) driving a ComfyUI instance: real-time queue over WebSocket, workflow import and editing, gallery, Tailscale-only network security.
